

A long-term therapeutic experience with Cernilton in Chronic Prostatitis

Jodai A, Maruta N, Shimomae E, Sakuragi T, Shindo K, Saito Y

Thirty-two patients with chronic prostatitis were given 6 tablets of Cernilton daily for 12.6 weeks on the average. Improvement of subjective symptoms and objective findings was noted in 74.2% and 65.6% of the cases, respectively. The effective rate was 75.0%. No subjective symptoms or abnormal changes in laboratory data were observed in any case after Cernilton medication.
